ABOUT MICROBOT MEDICAL

Microbot Medical Inc. (MBOT) is a pre-clinical medical device company that specializes in transformational micro-robotic technologies, focused primarily on both natural and artificial lumens within the human body. Microbot's current proprietary technological platforms provide the foundation for the development of a Multi Generation Pipeline Portfolio (MGPP). Microbot Medical was founded in 2010 by Harel Gadot, Prof. Moshe Shoham, and Yossi Bornstein with the goals of improving clinical outcomes for patients and increasing accessibility through the use of micro-robotic technologies.

KEY MILESTONE ACHIEVEMENTS

- Strengthened balance sheet to fund regulatory, clinical and development programs.
- Unveiled and successfully demonstrated the LIBERTY Robotic System, the world's first fully disposable robotic system for use in neurovascular, cardiovascular and peripheral vascular procedures:
 - Unique compact design with the capability to be operated remotely.
 - Reduces radiation exposure and physical strain to the physician.
 - Potential to eliminate the use of multiple consumables through its "One & Done" capabilities.
- Enhanced the leadership team's core capabilities, with the appointment of Dr. Eyal Morag as Chief Medical Officer and Aileen Stockburger and Tal Wenderow as Directors:
 - Dr. Morag will lead the development and execution of the clinical strategy of the Company's technology platforms, including its current development of the Self-Cleaning Shunt (SCS) and LIBERTY products as well as its future pipeline.
 - Ms. Stockburger's strategic track record and vast industry network will add tremendous value to Microbot and her proven experience in M&A as well as the formation and execution of strategic collaborations across the industry, will greatly enhance the Company's ability to achieve its strategic growth objectives.
 - Mr. Wenderow is a Healthtech and medical robotics executive with a proven track record in bringing innovative & disruptive technologies to the healthcare market, having co-founded Corindus Vascular Robotics which was acquired by Siemens Healthineers AG in Nov. 2019 for \$1.1B. Tal will contribute his extensive robotic medical device experience to the development of Microbot's technologies.
